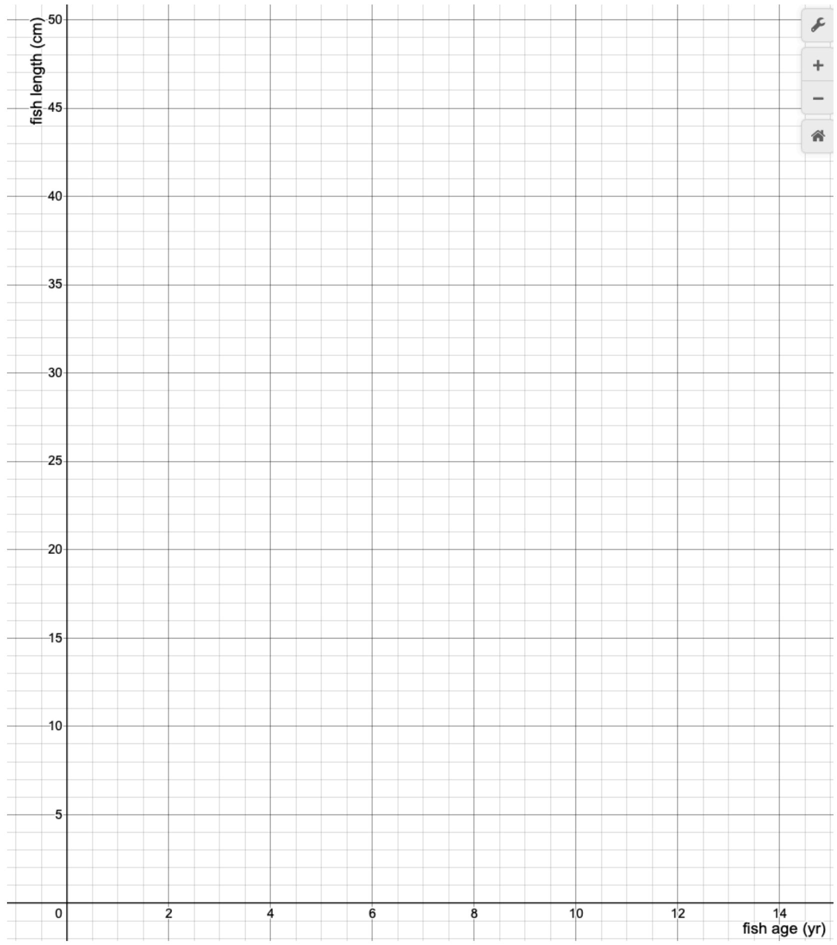
(attendance) Rectangular coordinates name:

Plot Points

yrs (x)	cm (y)	coordinate point
2	15	(2,15)
3	22	
4	30	
5	35	
6	38	
7	40	



Questions:

Is there a trend?

How would you describe the trend?

When would you harvest the fish?

You can describe a the relationship between fish age and fish length with a trend line!

⇒ Estimate the expected length of an 8 year old fish

→Estimate the length of a fish when it is born, when it is zero years old?

Intercepts

x-intercept: the x-value when y=0

AKA the left/right value at “ground level”

coordinate point: (???, 0)

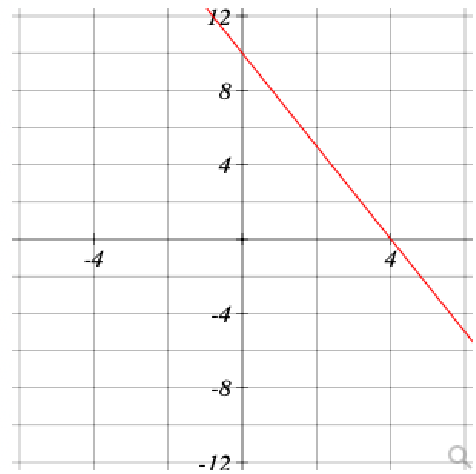
y-intercept: the y-value when x=0

AKA the up/down from the origin (0,0)

coordinate point: (0,????)

x-intercept point: (,   )

y-intercept point: (,   )



HW #7: What are the intercepts?

Intercepts without a graph, only an equation

$$5x+4y=20$$

x-intercept:

- occurs when y=0
- plug y=0 into the equation and solve for x. Complete the following:

$$5x+4y=20$$
$$5x+4(0)=20$$

$$x= \quad \rightarrow (\quad ,0)$$

y-intercept:

- occurs when x=0
- plug x=0 into the equation and solve for y. Complete the following:

$$5x+4y=20$$
$$5(0)+4y=20$$

$$y= \quad \rightarrow (\quad , \quad)$$

From equation, calculate ANY coordinate point. Plot a line

- plug in the x-values to calculate the y-value
- to plot the line: choose ANY 2 points and connect them 🙂

Question 5 0/2 pts 6 4 Details

Graphing Linear Equations by plotting points.

Complete the table below for the equation $6y - 36x = -12$. Then use two of the ordered pairs to graph the equation.

$$6y - 36x = -12$$

x	y	Ordered Pair
-2		
-1		
0		
1		
2
