

(attendance) Interval Notation w graphs

Practice interval notation to answer the following questions:

Graph of Bitcoin is called $B(x)$

Graph of Ethereum is called $E(x)$

- Domain of Bitcoin and Ethereum graphs:
- Range of Bitcoin, $B(x)$: Range of Ethereum, $E(x)$:
- Interval where the Bitcoin graph is **positive**, $B(x) > 0$:
- Interval where the Ethereum graph has a value less than -50 , $E(x) < -50$:
- Interval where Bitcoin is greater than Ethereum, $B(x) > E(x)$:
- Where does Bitcoin has a value of 0, $B(x) = 0$?
Where $x =$
- For Ethereum and Bitcoin, what is the value of the graphs at 50 days?
 $E(50) =$, $B(50) =$
- When does Ethereum have a value of 20, $E(x) = 20$?
When $x =$
- When was the minimum for Bitcoin?
